

Reactants

Rusting is a chemical reaction where oxygen from the air combines with iron.

Model this chemical reaction. Build the reactants with LEGO bricks. Place them on their pictures.

The image shows a grey rectangular area containing LEGO models of the reactants. On the left, four brown 1x4 bricks are stacked vertically. Below them is the text "4 Fe (iron)". On the right, three red 1x2 bricks are arranged to form three separate diatomic oxygen molecules. Each molecule consists of two red bricks connected by their long sides. Below these is the text "3 O₂ (oxygen)".

Products

Take apart the reactants from Side 1. Build the products below with the same LEGO bricks.
