

PFAS Molecules (Forever Chemicals) Answer Key

PFAS are a group of man-made molecules. PFAS coatings are used on products to protect them against heat, oil, stains, grease, and water. PFAS molecules are a concern for many reasons. They can contaminate soil and drinking water. PFAS are called "forever chemicals" because they are highly resistant to breaking down in the environment and the human body. PFAS molecules in the human body can cause health problems.

1 PFOA
Perfluorooctanoic Acid

2 PFOS
Perfluorooctane Sulfonate

3 PFNA
Perfluorononanoic Acid

4 PFHxS
Perfluorohexane Sulfonate

5 PFHpA
Perfluoroheptanoic Acid

6 PFDA
Perfluorodecanoic Acid
